Economics and Social Strategies

Jasmat Singh Gill
Student, Farmer, Independent Researcher

Abstract:

This paper presents a revolutionary blueprint for generational growth, economic reset, and systemic reform. Challenging the stagnant status quo of global labor and industry, we introduce a mathematically sound proposal to lower the global retirement age to 50, clearing the 'stagnation bottleneck' and creating an immediate surge in job openings for younger generations. Furthermore, drawing on direct boots-on-the-ground experience in the Punjab dairy sector and international heavy transport across Australia and New Zealand, we propose structural modernization in dairy farming, urban traffic management through structured multi-story parking, and strategic social economics to combat global recession and unemployment.
